

An aerial photograph of the Great Lakes Basin, showing the five Great Lakes (Superior, Michigan, Huron, Erie, and Ontario) and the surrounding land. The water is dark blue, and the land is a mix of green and brown. A dark, semi-transparent rectangular box is overlaid on the top half of the image, containing the title text in yellow.

# A Multi-temporal Digital Surface Elevation Model of the Great Lakes Basin

James Klassen, Keith C. Pelletier, Trevor Host, Jennifer Corcoran,

# MTVEM

(Multi-Temporal Vegetation Elevation Model)

Goal: Measure surface **elevation change** in the Great Lakes Basin multiple times a year to detect **disturbance** and **regeneration** of vegetation as it impacts **habitat**.

# Primary Study Sites

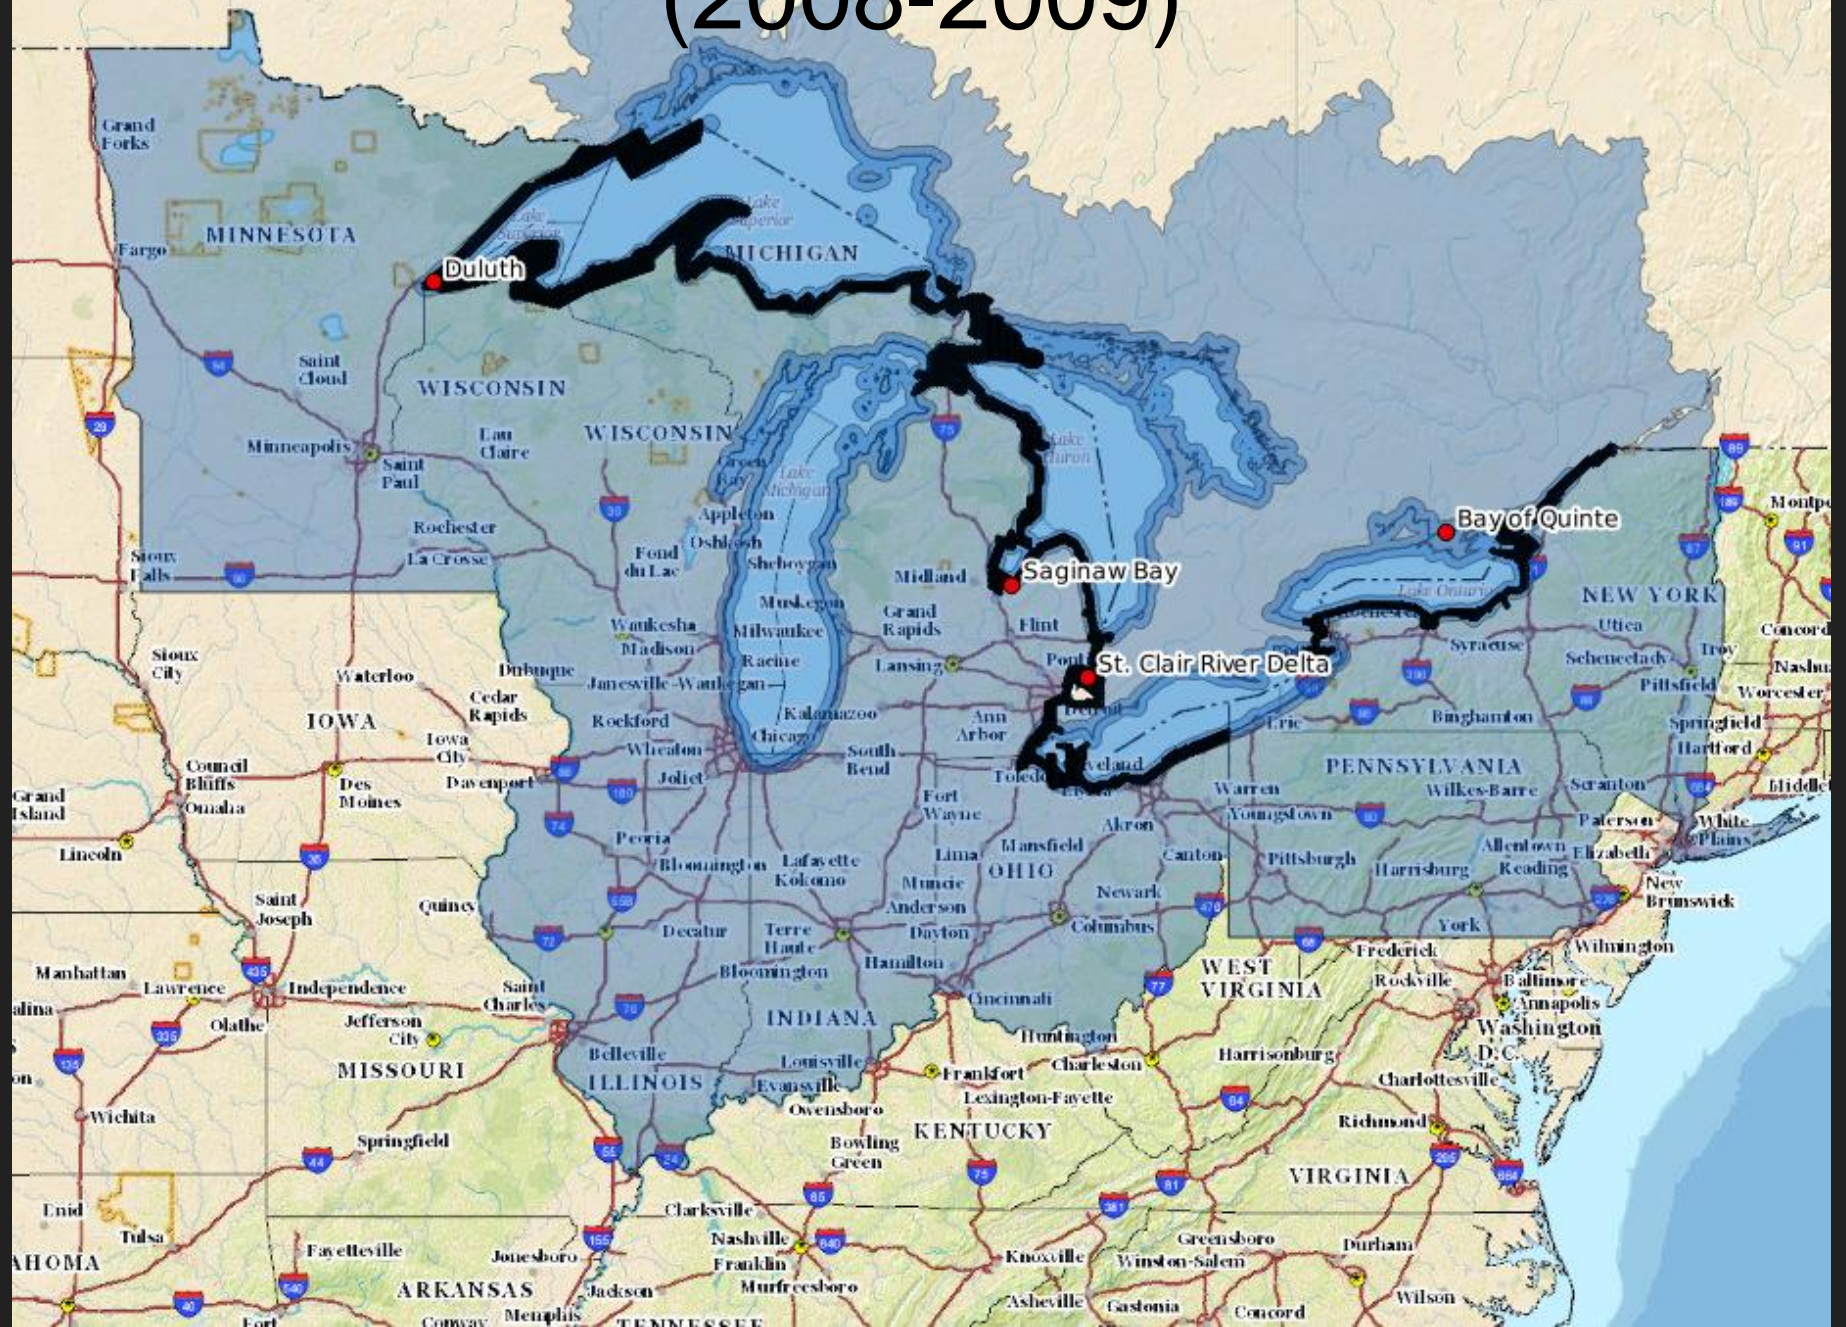

# The datasets

- NOAA Coastal Topobathy Lidar (2006-2013)
- MN Statewide Lidar Collect (2011)
- Border Patrol Stereo Air Photos (2008-2009)
- Digital Globe World View 1,2,3 Stereo (2007-2017)

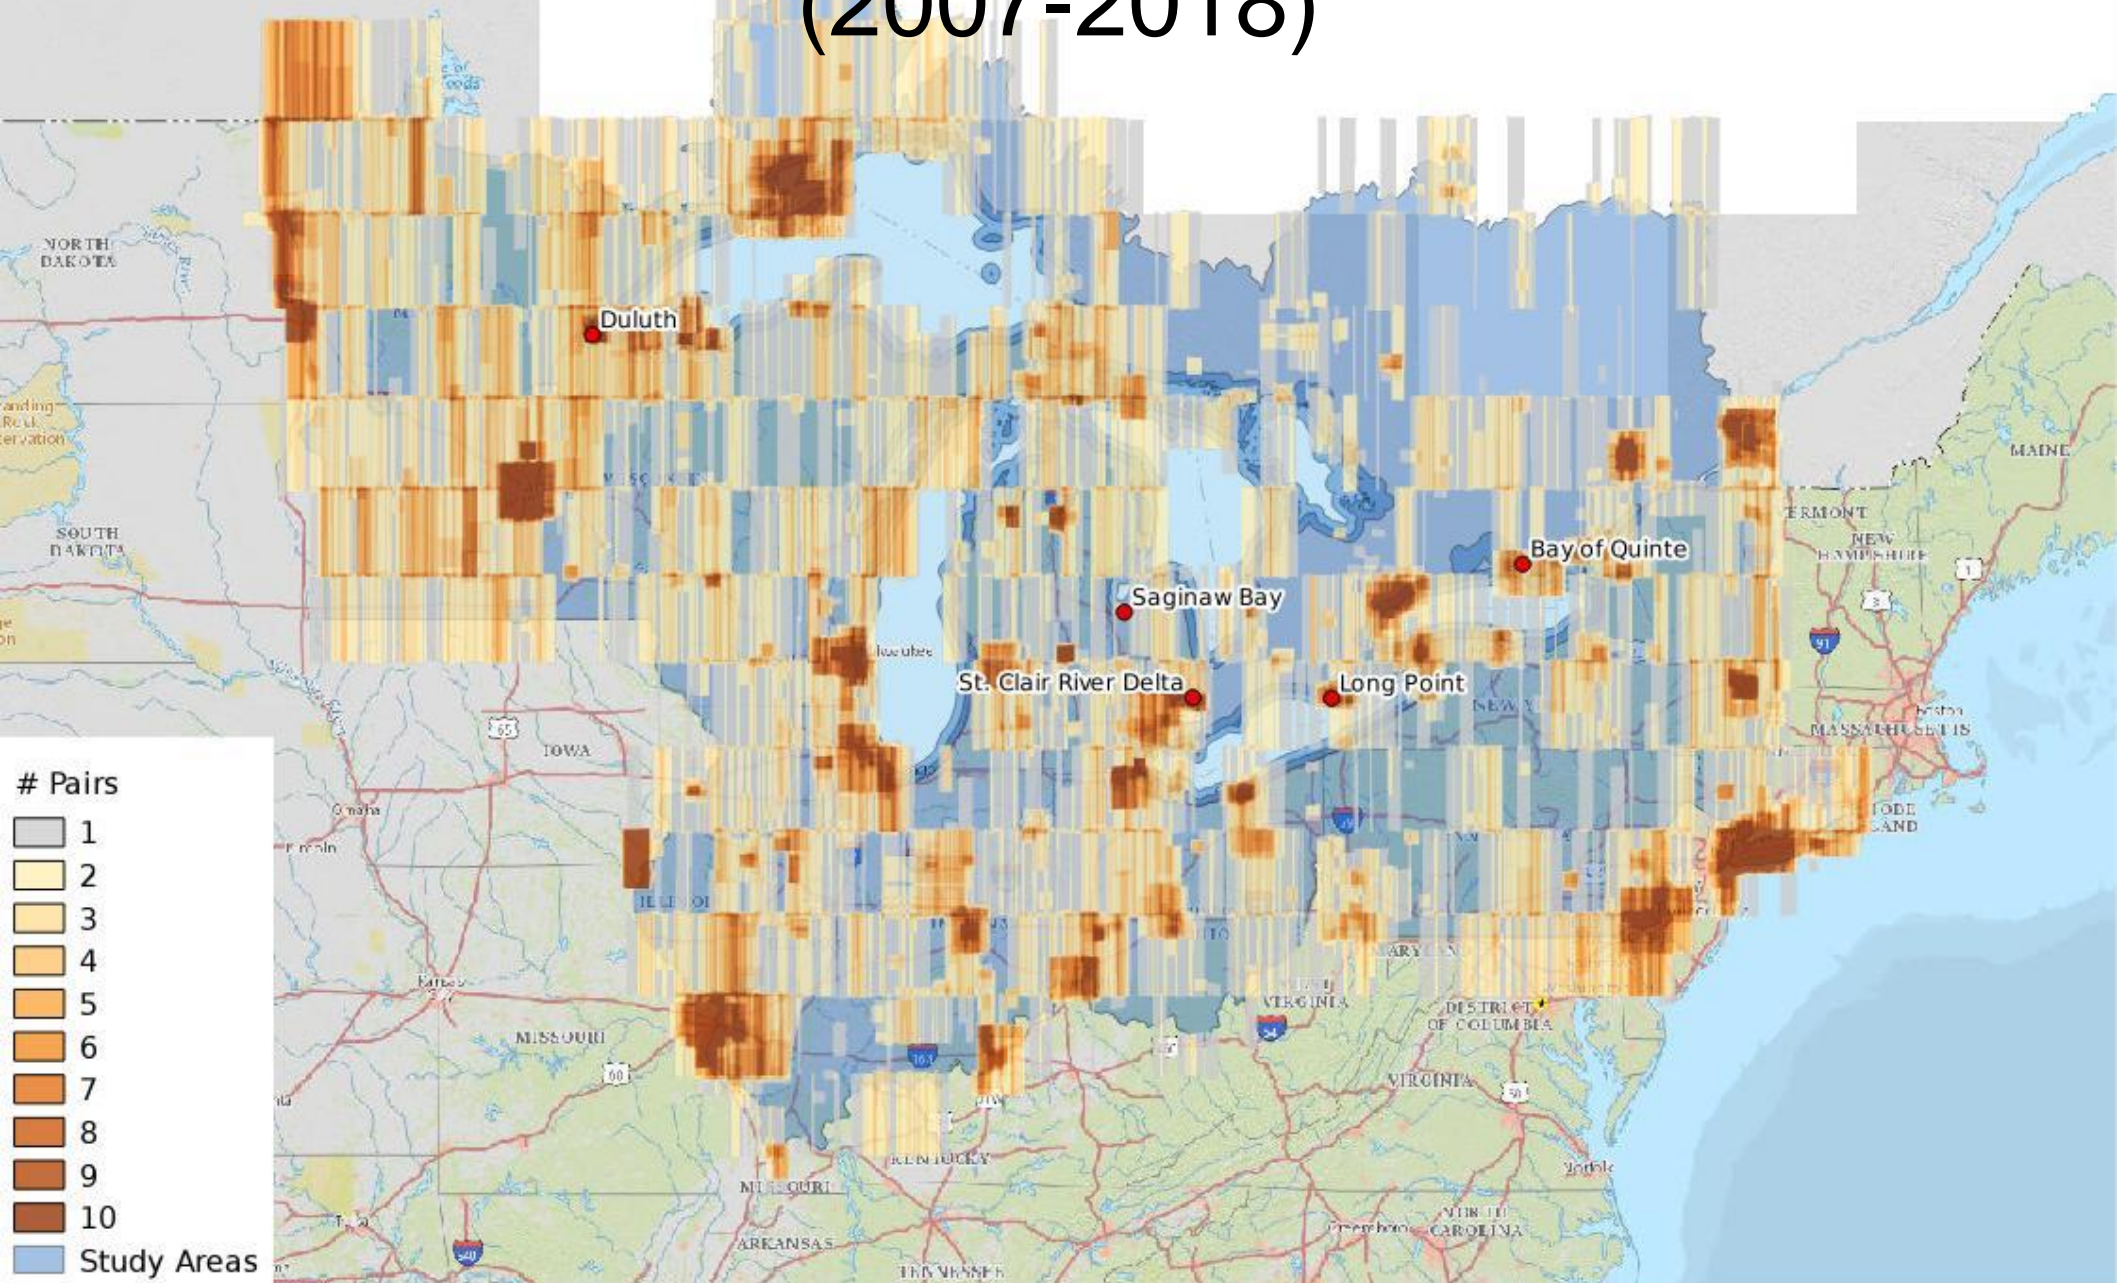

# MN Statewide Lidar (2011) and NOAA Coastal Topobathy Lidar (2006-2013)

# Border Patrol Stereo Aerial Photos (2008-2009)

# Digital Globe World View Stereo (2007-2018)

AIR PHOTO SUPPLY  
MODEL PS-2

BEC 14-11

# Digital Elevation Model Subtypes

## *Digital Surface Model (DSM) and Digital Terrain Model (DTM)*

- DSM shows 'tops of trees and structures', DTM removes cover to show 'bare earth'
- Both are important for modeling and mapping applications

# Steps

- Select pairs of overlapping images (math/GIS)
- Find matching features (messy math/stats)
- Estimate the position in space of each feature using what we know about the sensors, image locations, and the set of corresponding features (math that in theory is simple geometry, but much like this slide, is actually rather messy because nothing above is perfect).

# The ArcticDEM

# Ames Stereo Pipeline

- What: 3D reconstruction from photographs
- Who: Intelligent Robotics Group at NASA Ames
- Where:  
<https://ti.arc.nasa.gov/tech/asr/intelligent-robotics/ngt/stereo/>
- License: Apache 2.0

# Ames Stereo Pipeline

- Border Patrol Stereo Air Photos
- 16,268 pairs, 18.9 TB, over 160,000 sq.km.
- ~3 hours per pair.
- Hmmmm....

# SETS

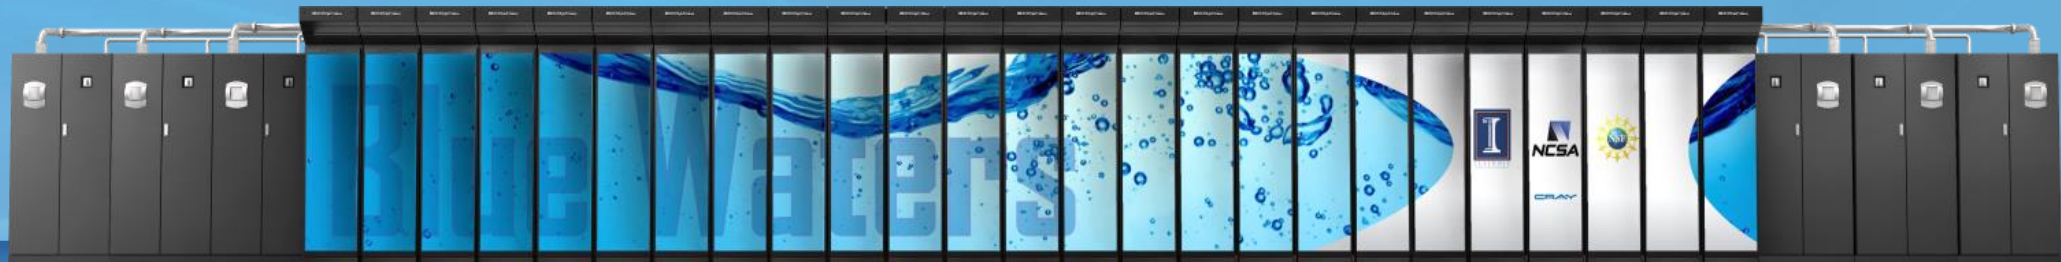

- What: Surface Extraction from TIN-based Searchspace Minimization
- Who: Byrd Polar & Climate Research Center
- Where: <https://u.osu.edu/setsm/>
- License: Apache 2.0

# SETS

- Digital Globe Satellite Imagery
- 15,000+ stereo pairs, 17TB+, 1,200,000 sq.km.
- Data is still being regularly collected.
- ~6 hrs per pair for 2m DSM
- Hmm...

# Elevation difference map:

MN Lidar (2012-05-15) vs. WV3 2016-06-08

## To do:

- New imagery is still being collected
- Evaluate 50cm DSMs
- Automate Change Detection
- Automate DSM Mosaics
- Produce Orthos for OBIA
- Error analysis
